

Mobile Surveillance System

IP wireless fiber optic remote power

Custom-built solutions for temporary site monitoring

KBC's Mobile Surveillance Systems are designed for applications that require temporary site monitoring. The units are compact, rugged, self-contained and easy to deploy and setup. The systems consist of a base unit with onboard solar panels, batteries and charge controller along with power and network connections for NVR, camera(s) and sensors. A removable quick-connect pod provides a mounting platform for the camera(s) and wireless system.

- ✓ Compact self-contained unit - maneuverable & easy-to-deploy
- ✓ Unique gas shock assisted mast lift assembly - elevation up to 14 feet
- ✓ Removable quick-connect interchangeable pods
- ✓ Remote, mobile - cost effective
- ✓ Highly configurable - optional configurations & accessories

Transmission Options

Depending on site conditions and requirements, the kits come with a number of transmission options:

Wireless: KBC wireless products: Point-to-point, point-to-multipoint or mesh

ThruLink™: secure WAN communication with embedded 4G/LTE

Additional Options

The systems will support optional hardened NVRs for local recording that come with the ability to load many popular VMS systems. Other options include industrial Ethernet switches and a range of power injectors.

Applications

- ✓ Law enforcement
- ✓ Construction sites
- ✓ Community/public events
- ✓ Schools/colleges/universities
- ✓ Residential/commercial property management
- ✓ Traffic monitoring/transportation
- ✓ Evacuation routes/emergency management

Please note: this system is available in North & Latin America only
