

Encrypted Connectivity Anywhere, Anytime Simple, Secure, Reliable

ThruLink™ delivers real-time encrypted video, voice, and data over any network — Internet, 3G, 4G, LTE, or 5G. Built for mission-critical sites, it ensures secure, always-on communication across fixed or mobile deployments. This hardware-based VPN works with any IP device and supports all protocols integrating easily with an existing VMS or network systems, and requires no cloud dependency — providing full local control.

With up to 256-bit encryption, automatic re-connection after outages, and a rugged industrial design, ThruLink™ offers dependable performance in harsh conditions. It replaces leased lines or VSAT with secure broadband or cellular links, reducing setup time, maintenance, and overall network costs.

Ideal for:

Surveillance • Transportation • Remote Monitoring • Industrial • Energy

TRANSPORTATION | SECURITY & SURVEILLANCE | INDUSTRIAL AUTOMATION | ENERGY & UTILITIES

Encrypted

up to 256-bit encryption always enabled for piece of mind

WAN/4G/5G Fail-over

Option to fail-over between WAN and cellular networks

IP Device Agnostic

Can work with any IP based device and any IP protocol
